OMNI COMPONENTS Hudson, NH

Omni Components Corp. is proud to announce that the scheduled move in December 2002 was a complete success. With the help of all employees and understanding from all customers and vendors, Omni is now fully operational in one facility. All associates of Omni will enjoy greater efficiency, increased capacity and added comfort in the new operation. Plans for building have been extended to the near future, as current

needs to relocate have brought about this more suitable and timely move.

The open house on April 11, 2003, was a great success and truly enjoyed by all. Everyone from customers and business partners, to town and state government were present for the tour of Omni's new facility. Omni Components Corp. would like to thank all who attended.

Omni Components Corp.

OPEN HOUSE April 11, 2003

Omni Components has completed the move and consolidation of their two facilities into one beautiful modern plant at 47 River Road, Hudson, NH.

Two of their Elit Vertical CNC mills (above) with bar feeders and a well equipped secondary department (right) in the new facility.

25 Citizen CNC, sliding headstock, multi-axis precision turning centers fill the main floor of the complex. Equipped with bar feeders, these machines are capable of producing 100% complete parts at incredible speeds. The parts can be turned to shape and size, then cross heads can mill the parts, drill them, taps them or slot them.

Water jet cutting is also available and some of the parts they have made are shown on the right.

When you look down the center aisle in the Citizens department, it's a site to see all these machines in operation, but it's the American flag on the wall above the windows that really says it all.
